

GREEN PV Mounter

Your entry into the solar industry

Entry-level solar certification for people who want to start working in practical PV installation. Demonstrate that you have built essential solar PV knowledge and practical installation skills.

3 Steps to Certification

1. Build your solar theory

Principles of PV Systems online learning is an affordable, flexible way to build your basic PV knowledge.

OR

Solar 101 is a 2-day classroom training covering PV fundamentals, system types, components, safety and basic principles.

2. Complete your practical training

The 2-day **PV Mounter** on-site training is a required practical component of the certification. (Includes 2 CPD points)

3. Pass the online exam

Achieve 50% or more to earn your **GREEN PV Mounter Certificate**.

 **Start with theory or practical.**

Put your skills to work

With the practical skills behind the GREEN PV Mounter Certificate you can:

- Support PV installation teams on-site
- Assist with mounting PV modules and mounting systems
- Work with different roof types and installation equipment
- Assist with PV wiring and installation tasks
- Support preparation and commissioning activities
- Build practical experience in the solar industry

As your knowledge and experience grow, you can continue your learning and work towards the PV GreenCard Installer Certification.

About this certification

Developed in response to industry needs, this practical certification recognises real PV mounting skills. Successful candidates earn a **GREEN Certificate of Achievement**, endorsed by the German Solar Energy Society (DGS e.V.).
